Antonis Konstantinidis

anthonykonsta04@gmail.com | +30 6949 90 70 73 | github.com/antoniskwns | Athens, Greece (EU citizen, open to relocation)

Education

Erasmus University Rotterdam — Rotterdam, Netherlands
MSc in Quantitative Finance — *Sep 2025 – Jun 2027 (expected)*

- Thesis: "The Shape of Evidence: Fuzzy Prediction Sets for Downstream Decisions"; proved the loss-proportional e-value is the unique valid e-value minimising a chosen action's expected-loss bound; showed the likelihood ratio can select against the decision-maker's own forecast, and that reshaping it recovers the optimum only when the loss is a function of the ratio
- Relevant coursework: Asset Pricing, Stochastic Calculus, Advanced Machine Learning, Quantitative Risk Management

University of Amsterdam — Amsterdam, Netherlands
BSc in Econometrics & Data Science — *Sep 2022 – Jul 2025*

- Thesis: "An Honest Assessment of Realized Volatility Forecasting with Feed-Forward Neural Networks and Traditional Models: Evidence from International Equity Markets under Normal Conditions and the COVID-19 Crisis"; benchmarked FFNNs against HAR-RV and GARCH via walk-forward validation and moving block bootstrap
- Relevant coursework: Econometrics, Probability & Statistics, Time Series, Reinforcement Learning, Multivariate Analysis

Peking University, Guanghua School of Management — Beijing, China
Exchange Semester — *Sep 2024 – Jan 2025*

- Relevant coursework: Financial Engineering & Risk Management, Shadow PBoC, Chinese Law and Economic Reform

Awards

Optiver Algorithmic Trading Competition — Rotterdam, Netherlands
4th Place among 50 teams — *Dec 2025*

- Built a live order-book market-making and arbitrage algorithm with adaptive execution, delta-neutral hedging and real-time risk limits

Greek Mathematics Olympiad — Greece
3rd Place (2017, 2019) & Distinctions (2018, 2020), Hellenic Mathematical Society competition series — *2016 – 2020*

Research & Work Experience

The Olayan Group — Athens, Greece
Quantitative Research Intern — *Sep 2026 – Dec 2026*

- Built a point-in-time monitor in BQuant estimating whether banks will call or extend their AT1 (CoCo) bonds, backing out the market-implied call probability from call-versus-extend scenario prices, with each bond priced off peer spreads rather than its own quote
- Added a penalised logit on capital headroom and refinancing economics, validated with purged cross-validation to rule out look-ahead leakage; ±25bp stress bands decide which signals are robust enough to publish
- Designed a subordinated-financials CDS hedge on state-contingent DV01; guarded the pipeline with a 263-check test suite

ABN AMRO — Amsterdam, Netherlands
Market Risk Trading Book Intern — *Jan 2026 – Jul 2026*

- Built and rewrote ∼10 automated Python risk tools (IRC, DRC, Deal Contingency Swaps, VaR, FRTB capital, XVA) that run unattended in production each morning, replacing manual Excel workflows
- Built an IRC impact calculator sizing Bloomberg-Murex reconciliation breaks, an IR/FX volatility tracker (EUR swaption ATM grid, FX implied vols), and a real-time web app for daily risk sign-off
- Monitored IRC/DRC limits by issuer and desk; analysed Greeks, VaR/SVaR and stress tests under FRTB-SA

Robeco — Rotterdam, Netherlands
Part-Time Quantitative Researcher, through EUR — *Jan 2026 – Apr 2026*

- Developed a three-layer online learning framework for fixed income volatility: parameter-free COCOB estimation of GARCH and HAR-RV recursions, multiplicative bias correction and PIT-based recalibration for VaR and ES
- Derived sublinear regret bounds for the online layers; validated calibration with Kupiec, Christoffersen and DQ backtests

Erasmus University Rotterdam — Rotterdam, Netherlands
Research & Teaching Assistant, "Advanced Machine Learning" — *Sep 2025 – Jun 2026*

- Built spillover-augmented factor GARCH volatility models with CAPM-consistent covariance forecasts; validated constrained minimum-variance portfolios with multi-horizon rolling out-of-sample backtests
- Replicated Brownlees & Souza (2021) Growth-at-Risk: quantile regression with GJR-GARCH and factor-GARCH forecast distributions across 24 countries and multiple horizons to assess tail risk in GDP growth

Valuelenz — Athens, Greece
Part-Time ML Researcher — *Jul 2025 – Sep 2025*

- Built a dynamic pricing engine for retail stores combining contextual multi-armed bandits, constraint-aware Thompson sampling, and Bayesian neural networks with multi-head attention and uncertainty quantification

Skills

Programming	Python, R, SQL, Stata, LaTeX
Platforms	Bloomberg (BQuant), Murex, Excel
Languages	Greek (native), English (fluent), Spanish (advanced), German & Dutch (intermediate), Mandarin (beginner)
Activities	Model UN (Student Officer at 5 conferences) / LAJF Camp Rising Sun 2019 (Greece representative)
